

J

Who will win??

Time limit: 1 sec

Dart game is played between two players in a different way. Here in this case, every player can shoot three darts for a single game. If one shoots the dart in particular place of the dart board, he/she can get 20, 40, 60, 80 or 100 points for that particular place. If anyone misses the dart board, gets 0 point. The player who scores more points, becomes the winner. If the scores are same, then the game is a draw.

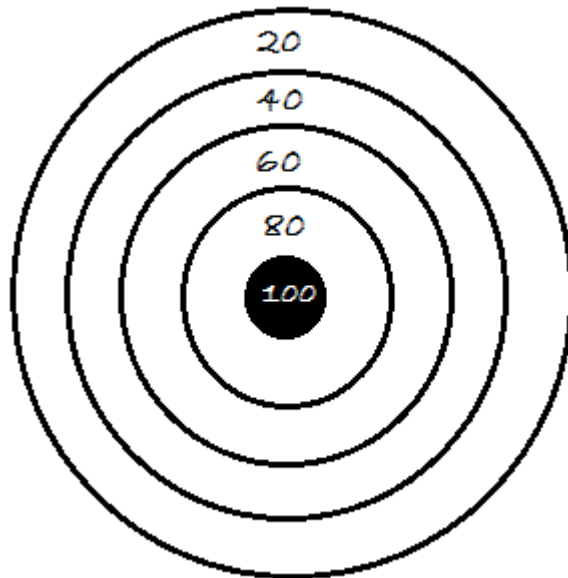

Before the mid break, Akash and Imran want to go to different places. Therefore, they decided to play the dart game and in that game the winner will decide the place. Can you help them finding the winner?

Input Specification:

There will be T test cases. In each test case, there will be two lines. Each line contains of three integer values denoting the point value of the three shots. The first line is the score of Akash and the second line is for Imran.

Output Specification:

You will need to print the name of the player who wins the game. If the scores are same, you will print "Draw" without the quote.

**Sample Input:**

```
3
30 100 20
60 40 40

60 80 0
20 80 60

20 20 20
60 0 0
```

Sample Output:

```
Akash
Imran
Draw
```
